## SOLAR PUMPING SYSTEM

Solar pumping system mainly consists of PV modules, solar pumping controller / inverter and water pumps. Solar panels convert sunlight to electrical energy which is passed to the solar pump controller. The solar controller stabilizes the voltage and output power to drive the pump motor. Even on cloudy days, it can pump 10% water flow per day. Sensors are also connected to the controller to protect the pump from running dry as well as to automatically stop the pump working when the tank is full.

Solar panel collects sunlight

- DC electricity energy
- solar controller (rectification, stabilization, amplification, filtering)
- available DC electricity
- (charge the batteries)
- pumping water

## ■ Solar Water Pump System Complete Set
