DIRECT DRIVE PRODUCT SELECTION GUIDE

DongGuan Kaifull Electronics Technology Co., Ltd is a high-tech enterprise that has always been committed to the R&D, production, and sales of high-quality motion control products. The company has always adhered to the corporate philosophy and development strategy of "market demand orientation, technological innovation as the core". After 16 years of hard work and operation, the company has developed into a leading domestic manufacturer of stepper motors, drivers and related products. Kaifull Technology has independent brands such as Kaifull and YARAK, and its products include stepper motor drive systems, servo motor drive systems, brushless motor drive systems, planetary reducers, hollow rotation

platforms, precision fine-tuning platforms, alignment platforms, linear motors, and other series of products. These products are widely used in high-tech industries such as 3C industry, CNC machine tools, medical equipment, laser engraving, textile printing, packaging machinery, electronic equipment, robots, lithium batteries and semiconductors.

The company has established production bases in Dongguan and Suzhou respectively, with strong research and development capabilities, advanced manufacturing equipment and processes, and the company adopts the comprehensive testing methods to ensure product quality and supply guarantee. Meanwhile, the company has an experienced sales and technical team that enhances customer value through services, constantly understands customer needs, continuously tracks customer development, and provides customers with the best motion control solutions. For 15 years, Kaifu Technology has adhered to the mission of "providing global leading motion control solutions" and is committed to making every intelligent manufacturing factory trust Kaifu's products and services!

Kaifull Motors-15 years of innovation and surpassing itself! Kaifull Motors, founded in 2008, is headquartered in Dongguan, a forefront of China's reform and opening up and a modern manufacturing city of China. Adhering to its development strategy that is "market-oriented, and places technological innovation as the core", the company has been achieving the common development of partners, employees and the company. After 15 years of unremitting efforts in technical research and development and market expansion, the company has been grown into a leading research and development manufacturer of stepper motors, drivers and related products in China, and its brand influence is constantly improving.

The company has its own brands "Kaifull" and "YARAK, and its products cover screw stepper motor, closed-loop stepper motor, deceleration integrated stepper motor, brake stepper motor, stepper driver, planetary reducer, hollow rotary platform, Motorized Stages Auto-positioning stages and so on. Setting "becoming the world's leading motion control manufacturer" as its mission, the company has set up a technical R & D and technological breakthrough team with high caliber talents from domestic 985 colleges and universities with master and doctor degrees. entrepreneurial and industry experts from Japan, Taiwan as well as overseas cooperation and development teams from Germany as the main force, which focuses on the research and development and application of advanced motion control technologies in the industry, and it has made a number of invention patents and technical patents up to the present.

Direct Motor Application Manual

For detailed technical information and specifications of this product, please refer to the official website.

Product Overview

Direct drive linear motor (referred to as the linear motor) is a device that directly completes linear transmission. It can directly replace mechanical transmission parts such as ball screws, racks/gears, belts/pulleys, etc., greatly reducing transmission clearance and related issues such as noise, wear, and vibration caused by mechanical transmission. The essence of linear motor transmission is to lay flat and unfold the stator and rotor of the rotating motor and directly connect them to drive the load. The linear motor has the characteristics of high transmission efficiency and good dynamic response. With the development of industrial automation and the improvement of equipment requirements, the application of linear motors is becoming increasingly widespread.

Types

There are many types of linear motor, and each type has its own advantages and can provide users with suitable solutions.

At present, there are two main types of linear motor: iron core linear motor and non-iron core linear motor. Different motors have different characteristics and functions. Different motors have different performance to meet the ever-changing application needs of customers in various industries.

Advantages

High Accuracy

The linear motor can achieve direct transmission, eliminate various accumulated accuracy errors caused by intermediate links, and also avoid the shortcomings of traditional transmission such as reverse clearance, inertia, friction, and insufficient rigidity, achieving higher precision transmission.

Good Safety, High Reliability, Little Maintenance and Long Service Life

The linear motor can achieve contactless transmission. Thanks to its almost zero mechanical friction loss and few faults, it has good safety, high reliability and has a long service life, with little maintenance.

Low Mechanical Noise

The transmission method of linear motor is different from that of rotary motor. The linear motor transmission eliminates all intermediate mechanical transmission links from the motor to the workbench, achieving "zero contact and zero transmission", resulting in low noise and vibration during system operation, and greatly improving the equipment performance.

Infinite Stroke, Multi-rotor Synchronous/Asynchronous Transmission

The stroke of a linear motor can be achieved through the splicing of the stator to achieve infinite stroke transmission, and multiple rotors can also be configured on the same stator to achieve independent motion control at the same axis direction.

Good Dynamic Characteristics

The frameless part of the linear motor is a non-contact component with no mechanical transmission limitations. It can achieve high-precision motion control from low speed to high speed in different ranges, with high dynamic response, strong real-time performance, and extremely high acceleration (up to 20g).

Simple Mechanical Structure

The linear motor eliminates the need for additional devices to convert rotational motion into linear motion, greatly reducing the difficulty of structural design, manufacturing and assembly, and reducing overall weight and size.

Applications

Semiconductor

Process:

Wafer slicing, cracking, chip packaging detection, fiber coupling, etc.

PV

Process:

Screen printing, slicing, sorting, string welding and testing, etc.

3C Electronics

Process:

Automatic loading and unloading, pasting, dispensing, inspection, sorting, packaging, etc.

New Energy Industry

Process:

New energy battery lamination, welding, liquid injection, packaging and testing, etc.

Laser

Process:

Drilling technology for products such as SMT inductor ceramics, semiconductor microelectronics TSV, engine fuel injectors.

LCD Panel Industry

Process:

Dispensing, bonding, cutting, testing, etc.

Linear Motor Selection Elements

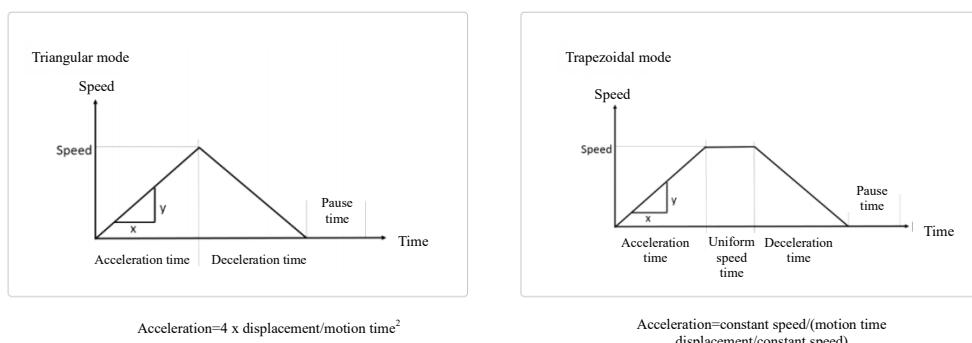

■ Selection Elements

- 1. The selection elements of linear motor includes maximum thrust, continuous thrust requirements, and acceleration calculation.
- 2. The maximum thrust is determined by the mass of the moving load and the value of the maximum acceleration.

Thrust=Total mass x acceleration+friction+external stress

Example: When the moving load is 5Kg (including the rotor), the required acceleration is 30m/s², the friction force is 1N, and the external stress is 2 N, the motor will generate a force of 153N.

- 3. However, the commonly known parameter is the movement time of the load from one position to another, and the acceleration is calculated based on displacement and movement time. Generally, for short stroke, we recommend using the triangular speed mode (without constant speed), while for long stroke, the trapezoidal speed mode will be more efficient. In the triangular speed mode, the motor does not move at a uniform speed and is consistently in a state of acceleration and deceleration.

- 4. In most cases, acceleration is approximately equal to deceleration, unless there is an unbalanced force (gravity) acting on the motor.

- 5. Maximum thrust is to ensure that the load reaches the expected acceleration within the time we set, while continuous thrust is to ensure that the load can continue to move steadily and maintain a constant speed. Calculation formula for continuous thrust:

$$\text{RMS Force} = \sqrt{\frac{Fa^2 * Ta + Fc^2 * Tc + Fd^2 * Td + Fw^2 * Tw}{Ta + Tc + Td + Tw}}$$

RMS Force = continuous thrust

Fa=acceleration force

Ta=acceleration time

Fc=constant speed segment force

Tc=constant speed time

Fd=deceleration force

Td=deceleration time

Fw=stagnation force

Tw=stagnation time

Note: To maintain a constant speed, the motor will resist friction and external stress. When the servo on the motor stagnates, it will resist external stress. A certain safety factor shall be multiplied by when choosing a suitable linear motor based on maximum thrust and sustained thrust. The safety factor is generally 1.3.

- 6. For example, in an application, the motor needs to move a 4KG load by 0.3m within 0.2s in the triangular mode. The stagnation time before returning during the same stroke of the motor is 0.15 seconds. Assuming that friction and other unbalanced forces do not exist.

Maximum thrust=acceleration force=deceleration force=load x acceleration=4 x 30=120N

$$\text{RMS Force} = \sqrt{\frac{(120)^2 * (0.1) + (120)^2 * (0.1)}{0.1 + 0.1 + 0.15}} = 90.7\text{N}$$

Then, consider a safety factor of 30%.

KFX Series Linear Module

For detailed technical information and specifications of this product, please refer to the official website.

■ Product Advantages

① High speed

The maximum speed can reach 3m/s, and the maximum acceleration and deceleration can reach 5G.

③ Low noise, dust-free

By combining a linear motor and a linear guide rail, the noise remains low during high-speed operation, and the moving stator has no contact friction and does not generate dust.

⑤ Long stroke

The base of the profile can be molded for 6 meters, with a stroke of 5633mm. Theoretically, it can be assembled into a module with infinite stroke.

② High precision

By utilizing the full closed-loop control of a linear encoder, high positioning accuracy can be compensated.

Repetitive accuracy of optical grating 2 μM

Repetitive accuracy of magnetic grating 3 μM

④ Multiple rotors

On a single axis module, multiple rotors can be selected.

⑥ High acceleration and deceleration

It can achieve high acceleration and deceleration of 5G.

■Parameters Overview

Item	Motor model		KFS075B	KFS075C	KFS075D				
Sliding table length	mm		152	235	300				
Continuous thrust	N		226	336	449				
Peak thrust	N		519	774	1032				
Max. load ^{*1}	500mm/s	kg	48	68	90				
	1000mm/s		25	36	48				
Number of sliding blocks			4	6	6				
Mass of moving part ^{*2}	kg		4.2	6.3	7.3				
Incremental encoder ^{*3}	Magnetic grating		Resolution: 1um; repetitive accuracy ± 3um; maximum speed: 5m/s						
	Optical grating		Resolution: 0.5um; repetitive accuracy ± 2um; maximum speed: 3m/s						
Operating ambient temperature, humidity	0-40 °C, 20-80% RH (without condensation)								
Motor extension cable ^{*4}	Standard cable length Lxx: 03, 05, 08, 10, 12, in meter								
Adapted driver ^{*5}	/								
Module outgoing line	Standard outgoing line 0.5 m								

*1. The maximum load is the theoretical value when placed horizontally, with an acceleration of 1G, a pause of 0.5s, and a 1000mm stroke, for reference only. The actual load is affected by factors such as motion speed, acceleration, and motor thrust;

*2. It includes the mass of components such as motor, sliding block, workbench, encoder, etc., excluding the mass of cables;

*3. This data is based on measurements made using the RENISHAW laser interferometer at an ambient temperature of 20 °C within any stroke range of 1000mm;

*4 If you need to purchase an extension cable, please consult Kaifull Technology.

*5. Please consult Kaifull Technology for driver selection.

Item	Motor model	KFS075B	KFS075C	KFS075D
Continuous thrust (N)	226	336	449	
Peak thrust (N)	519	774	1032	
Continuous current (A)	5.1	5.1	5.1	
Peak current (A)	15	15	15	
Thrust constant ± 10% (N/A)	48.1	71.7	95.6	
Reverse electromotive force constant ± 10% (V/m/s)	41.8	62.3	83.1	
Motor constant ± 10% (N/√W)	18.8	22.9	26.4	
Resistance ± 10% (ohm)	6.63	9.68	13.26	
Inductance ± 30% (mh)	24.54 .	35.81	49.08	
Electrical time constant (ms)	3.7	3.7	3.7	
Rated power (W)	256	384	512	
Maximum power (W)	3188	4782	6376	
Magnetic pitch (mm)	32	32	32	
Thermal dissipation constant (W/°C)	4.3	6.4	8.5	
Magnetic attraction (KN)	1.3	1.8	2.3	
Rotor weight (Kg)	7.73	2.48	3.2	
Maximum temperature (°C)	120	120	120	

*1. The measurement room temperature is 25 °C, depending on the heat dissipation environment.

*3. Inductance measurement frequency is 1kHz.

*5. The maximum duration of maximum thrust is 1 second.

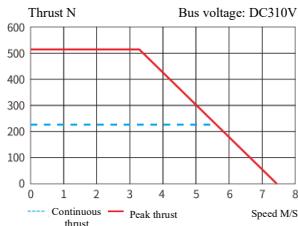

*2. DC current is adopted for the resistance measurement, including 0.5-meter standard cable.

*4. For unmarked dimensional tolerance, the tolerance shall be ± 0.1mm.

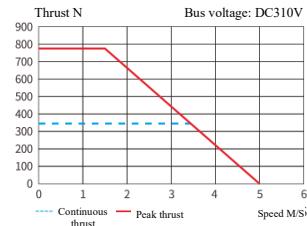

*6. The relevant parameter regulations are subject to change without prior notice.

Parameters Overview

Item	Motor model		KFS075B	KFS075C	KFS075D				
Sliding table length	mm		170	235	300				
Continuous thrust	N		318	477	636				
Peak thrust	N		747	1220	1494				
Max. load ^{*1}	500mm/s	kg	65	95	125				
	1000mm/s		35	50	65				
Number of sliding blocks			4	4	6				
Mass of moving part ^{*2}	kg		5.5	7.5	9				
Incremental encoder ^{*3}	Magnetic grating		Resolution: 1um; repetitive accuracy ± 3um; maximum speed: 5m/s						
	Optical grating		Resolution: 0.5um; repetitive accuracy ± 2um; maximum speed: 3m/s						
Operating ambient temperature, humidity	0-40 °C, 20-80% RH (without condensation)								
Motor extension cable ^{*4}	Standard cable length Lxx: 03, 05, 08, 10, 12, in meter								
Adapted driver ^{*5}	/								
Module outgoing line	Standard outgoing line 0.5 m								

*1. The maximum load is the theoretical value when placed horizontally, with an acceleration of 1G, a pause of 0.5s, and a 1000mm stroke, for reference only. The actual load is affected by factors such as motion speed, acceleration, and motor thrust;

*2. It includes the mass of components such as motor, sliding block, workbench, encoder, etc., excluding the mass of cables;

*3. This data is based on measurements made using the RENISHAW laser interferometer at an ambient temperature of 20 °C within any stroke range of 1000mm;

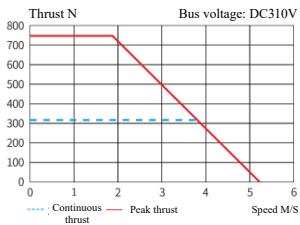

*4 If you need to purchase an extension cable, please consult Kaifull Technology.

*5. Please consult Kaifull Technology for driver selection.

Peak thrust (N)		1617	2157	3234
Continuous current (A)		5.1	10.2	10.2
Peak current (A)		15.3	30.6	30.6
Thrust constant ± 10% (N/A)		146.8	97.9	146.8
Reverse electromotive force constant ± 10% (V/m/s)		127.7	85.1	127.7
Motor constant ± 10% (N/√W)		36.1	41.7	51.1
Resistance ± 10% (ohm)		16.88	5.67	8.45
Inductance ± 30% (mh)		64.16	21.56	32.11
Electrical time constant (ms)		3.8	3.8	3.8
Rated power (W)		645	860	1289
Maximum power (W)		8031	10711	16057
Magnetic pitch (mm)		32	32	32
Thermal dissipation constant (W/°C)		10.7	14.3	21.5
Magnetic attraction (KN)		3.6	4.6	6.6
Rotor weight (Kg)		4.41	5.57	8.41
Maximum temperature (°C)		120	120	120

*1. The measurement room temperature is 25 °C, depending on the heat dissipation environment.

*2. DC current is adopted for the resistance measurement, including 0.5-meter standard cable.

*3. Inductance measurement frequency is 1kHz.

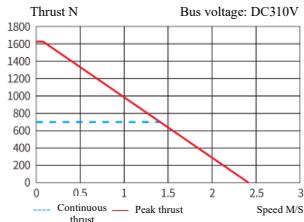

*4. For unmarked dimensional tolerance, the tolerance shall be ± 0.1mm.

*5. The maximum duration of maximum thrust is 1 second.

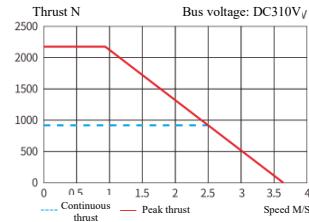

*6. The relevant parameter regulations are subject to change without prior notice.

KE Series Linear Module

For detailed technical information and specifications of this product, please refer to the official website.

■Features

Simplified and Modular Structure

Unlike that traditional linear motor composed of multiple components, the product integrates the base and the guide rail, and integrates the sliding block, sliding table and reading head support, forming a simple and solid integrated module.

More Oil Storage, Longer Operation

The oil storage space is large, and the largest module can run 100 thousand kilometers when fully filled with oil.

Wide Applications

The module still operates well when withstanding a lateral eccentric load of 500mm.

Superhigh Accuracy, Never Getting Loose

The guide rail is directly embedded into the aluminum profile using a special process, and then processed with a high-precision grinder to form it in one go, making the linear motor more precise, sturdy, and durable.

Larger Load, More Stable Operation

A large number of large-sized precision steel balls are embedded inside the sliding block, with each ball having the bearing capacity of 1 to 2 tons.

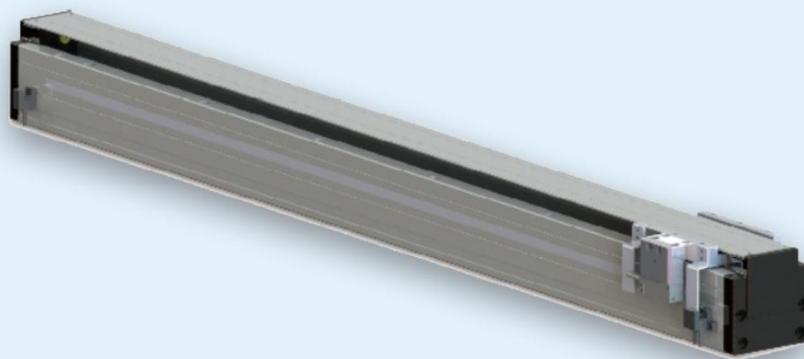

Better Materials, Resistant to Wear and Rust

The embedded guide rail is made of stainless steel material, which is more wear-resistant, corrosion-resistant, and rust resistant.

- Linear motor drive
- Optical grating positioning/magnetic grating positioning
- High stability, high reliability, and high response speed
- No back clearance error
- Smooth movement, no wear, long service life
- Compact and modular design

● Motor Configuration and Performance Parameters

Motor	YK-M1-W28-C6-0.3 power cord length: 200mm
Drives	Continuous current: 2.5A Peak current: 10A
Feed back	Magnetic grating: DMT-010 1.0 μm resolution; wiring length: 200mm Optical grating: AM4D40R 1.0μm resolution; wiring length: 200mm
Guide rail	Embedded double guide rail
Thrust	Continuous thrust: 44.8N Peak thrust: 179N
Load	At an acceleration of 1G, a speed of 500mm/s, a dwell time of 0.2s, and a running stroke of 600mm: Module horizontal installation: Load ≤ 5kg Module side mounted installation: Load ≤ 3kg; the maximum operating speed limit is 1200mm/s
Accuracy	Magnetic grating: Repetitive accuracy: ±5μm grating: repetition accuracy: ±3μm
Straightness	±10μm/300mm
Weight	60mm stroke 2kg (stroke increases by 0.32kg for every additional 60mm)
Installation Methods	Horizontal installation/side mounted installation (base side as the module reference)
Peak current	10.0Arms
Continuous current	2.5Arms
Recommended model of driver	Servotronix innovation bus CDHDE-4D52AEB (with connector)/Servotronix pulse CDHDE-4D52AAP (with connector)

● Motor Parameters

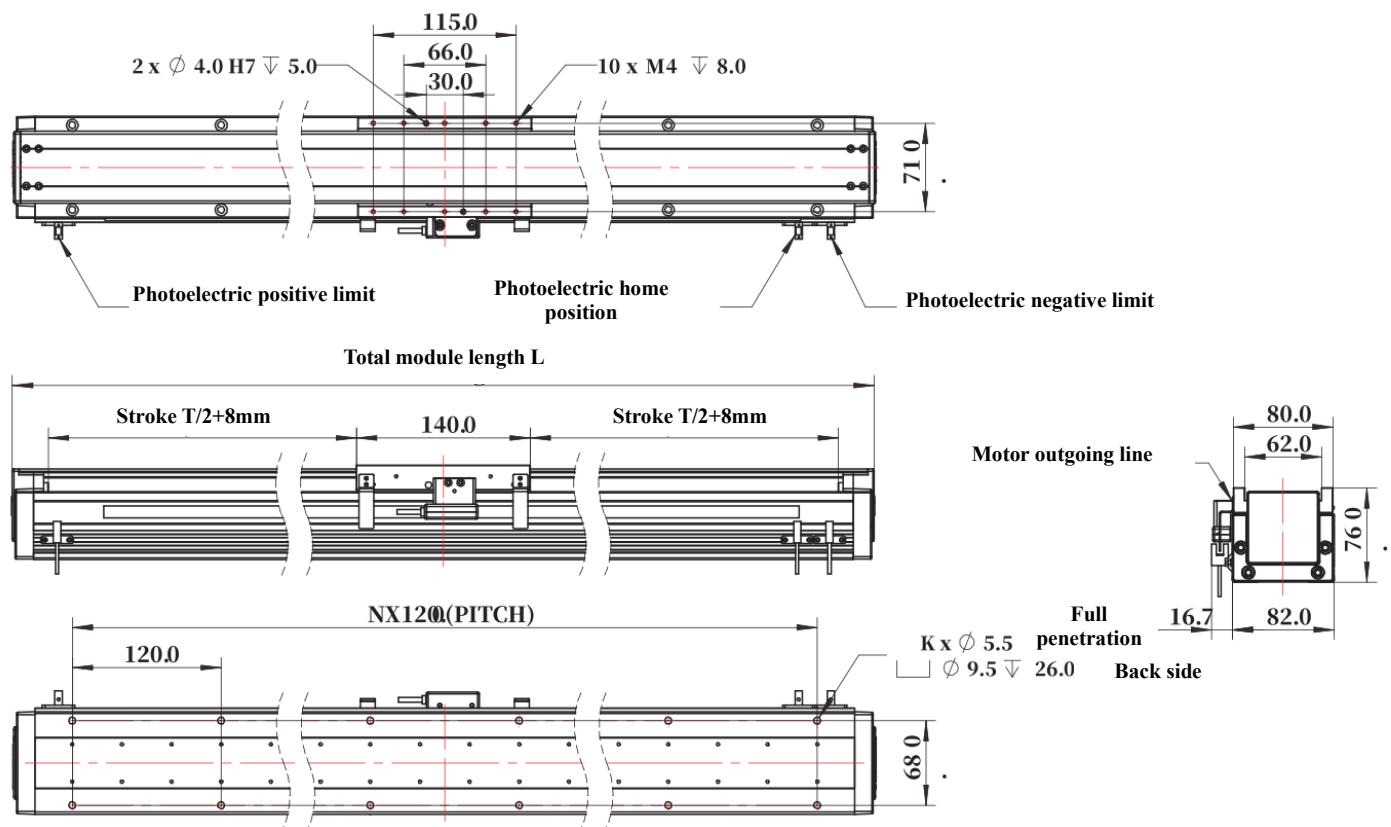

YK-KE-60	
Peak thrust	179.0N
Continuous thrust	44.8N
Motor constant	7.0N/(Wl/2)
Max. continuous power dissipation	41.2W
Peak current	10.0Arms
Continuous current	2.5Arms
Force constant	17.9 N/Arms
Back EMF	14.6 Vpeak/(m/s)
Resistance Phase to Phase @25°	3.2 ohms
Inductance phase to phase	9.4mH
Electrical time constant	3.0 ms
Max. terminal voltage	460 Vdc
Max. winding temperature	120°C
Coil weight	0.35 KG
Electrical cycle length	20.0mm

• Motor Configuration and Performance Parameters

Motor	YK-M1-W60-C9-0.3 power cord length: 200mm
Drives	Continuous current: 2.5A Peak current: 10A
Feed back	Magnetic grating: DMT-010 1.0 μm resolution; wiring length: 200mm Optical grating: AM4D40R 1.0 μm resolution; wiring length: 200mm
Guide rail	External embedded double guide rail
Thrust	Continuous thrust: 110.5N Peak thrust: 442N
Load	At an acceleration of 1G, a speed of 1000mm/s, a dwell time of 0.2s, and a running stroke of 1000mm: Horizontal installation: Load \leq 18kg side mounted installation: Load \leq 15kg; maximum operating speed limit: 2000mm/s
Accuracy	Magnetic grating: Repetitive accuracy: $\pm 5\mu\text{m}$ grating: repetition accuracy: $\pm 3\mu\text{m}$
Straightness	$\pm 10\mu\text{m}/300\text{mm}$
Weight	60mm stroke 6.4kg (stroke increases by 0.65kg for every additional 60mm)
Installation Methods	Horizontal installation/side mounted installation (base side as the module reference)
Recommended model of driver	Servotronix innovation bus CDHDE-4D52AEB (with connector)/Servotronix pulse CDHDE-4D52AAP (with connector)

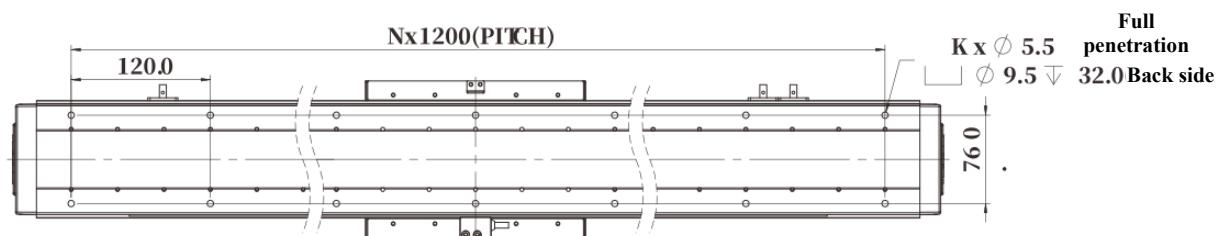

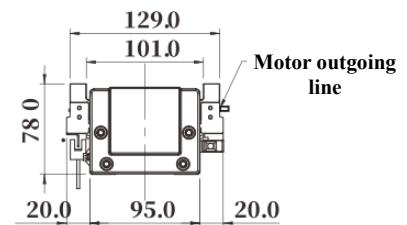

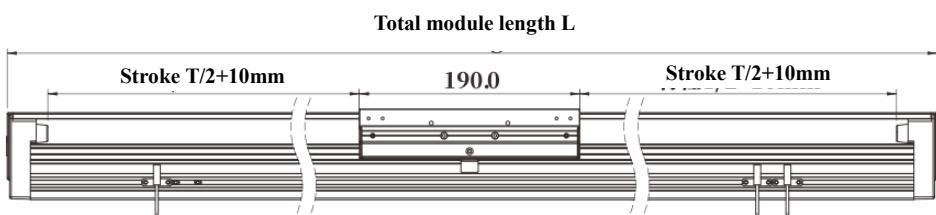

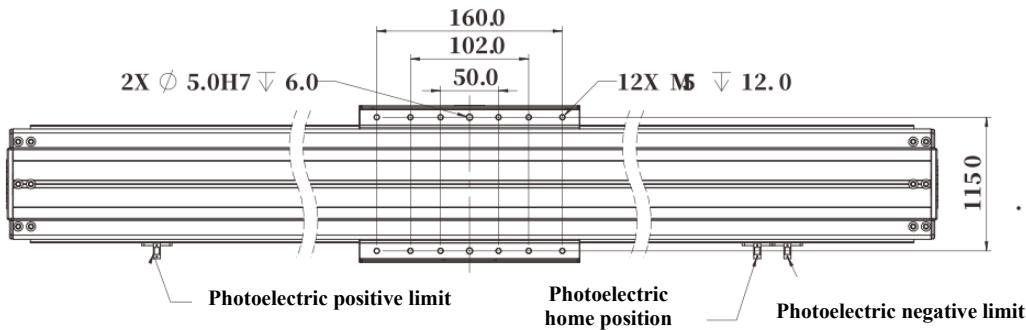

• Motor Parameters

YK-KE-95-A	
Peak thrust	442.0 N
Continuous thrust	110.5 N
Motor constant	23.4 N/(W1/2)
Max. continuous power dissipation	259.8 W
Peak current	10.0Arms
Continuous current	2.5 Arms
Force Constant	44.2 N/Arms
Back EMF	36.2 Vpeak/(m/s)
Resistance Phase to Phase @25°	7.2ohms
Inductance phase to phase	27.7 mH
Electrical time constant	3.8 ms
Max. terminal voltage	460Vdc
Max. winding temperature	120°C
Coil weight	1.1KG
Electrical cycle length	20.0mm

● Motor Configuration and Performance Parameters

Motor	YK-KFM02-W60-C1C2-0.3 power cord length: 200mm
Drives	Continuous current: 5A Peak current: 20A
Feed back	Magnetic grating: DMA-010 1.0 μm resolution; wiring length: 200mm Optical grating: AM4D40R 1.0 μm resolution; wiring length: 200mm
Guide rail	Internal and external embedded four guide rails
Thrust	Continuous thrust: 225.8N Peak thrust: 900N
Load	At an acceleration of 1G, a speed of 1000mm/s, a dwell time of 0.2s, and a running stroke of 1000mm: Horizontal installation: Load \leq 35kg side mounted installation: Load \leq 25kg; maximum operating speed limit: 2000mm/s
Accuracy	Magnetic grating: Repetitive accuracy: $\pm 5\mu\text{m}$ grating: repetition accuracy: $\pm 3\mu\text{m}$
Straightness	$\pm 10\mu\text{m}/300\text{mm}$
Weight	60mm stroke 11kg (stroke increases by 0.8kg for every additional 60mm)
Installation Methods	Horizontal installation/side mounted installation (base side as the module reference)
Recommended model of driver	Servotronix Pulse CDHDE-0102AAP (with connector)/ Servotronix Bus CDHDE-0102AEB (with connector)

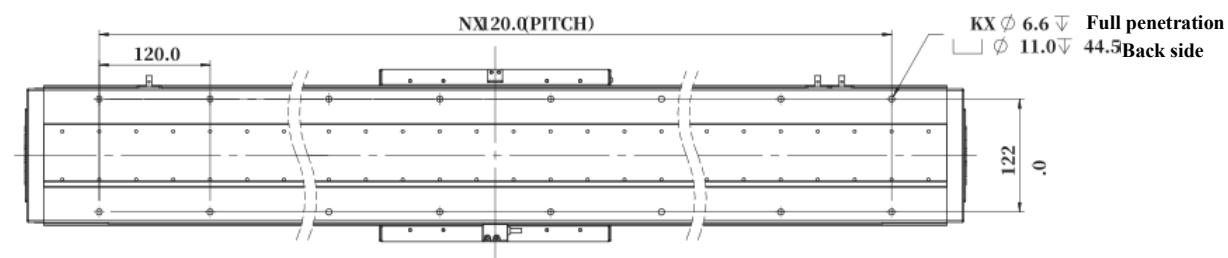

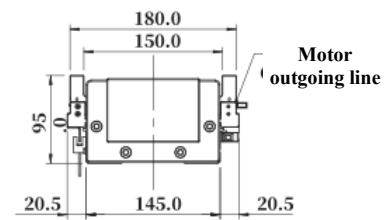

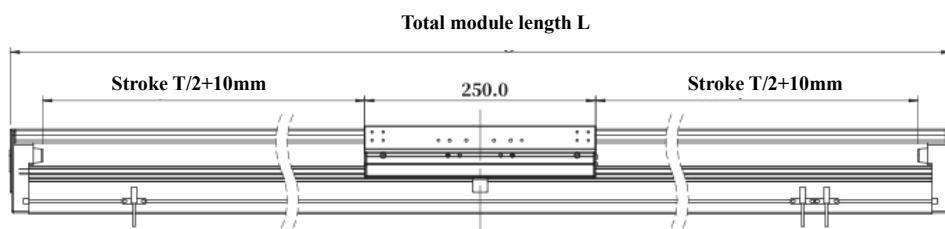

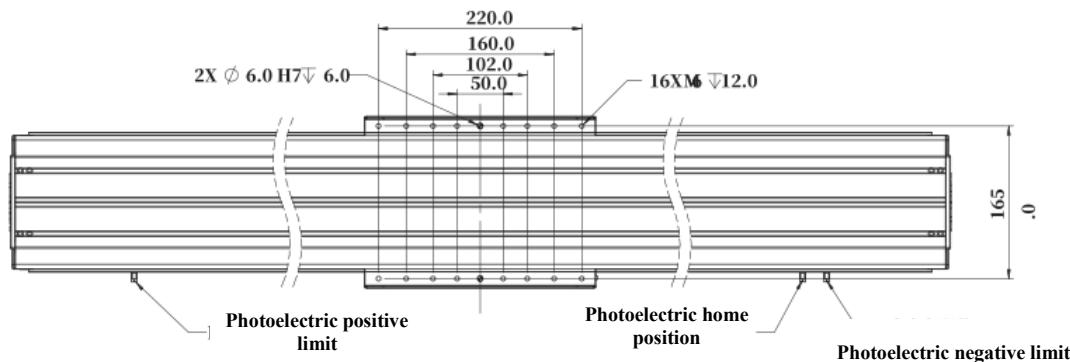

● Motor Parameters

YK-KE-145-A	
Peak thrust	900.0 N
Continuous thrust	225.8 N
Motor constant	17.8N/(W1/2)
Max. continuous power dissipation	159.6 W
Peak current	20.0 Arms
Continuous current	5.0 Arms
Force constant	45.2 N/Arms
Back EMF	36.8 Vpeak/(m/s)
Resistance Phase to Phase @25°	3.1 ohms
Inductance phase to phase	23.0 mH
Electrical time constant	7.4 ms
Max. terminal voltage	540Vdc
Max. winding temperature	120°C
Coil weight	2.3KG
Electrical cycle length	20.0mm

YK-KE-145-B semi-closed KE series linear module

• Motor Configuration and Performance Parameters

Motor	YK-KFW03-W90-C1C2-0.3 power cord length: 200mm
Drives	Continuous current: 5A Peak current: 20A
Feed back	Magnetic grating: DMA-010 1.0 μm resolution; wiring length: 200mm Optical grating: AM4D40R 1.0 μm resolution; wiring length: 200mm
Guide rail	Internal and external embedded four guide rails
Thrust	Continuous thrust: 561N Peak thrust: 2244N
Load	At an acceleration of 1G, a speed of 1000mm/s, a dwell time of 0.2s, and a running stroke of 1000mm: Horizontal installation: Load \leq 75kg side mounted installation: Load \leq 60kg; maximum operating speed limit: 2000mm/s
Accuracy	Magnetic grating: Repetitive accuracy: $\pm 5\mu\text{m}$ grating: repetition accuracy: $\pm 3\mu\text{m}$
Straightness	$\pm 10\mu\text{m}/300\text{mm}$
Weight	60mm stroke 20kg (stroke increases by 1.5 kg for every additional 60mm)
Installation Methods	Horizontal installation/side mounted installation (base side as the module reference)
Recommended model of driver	Servotronix Pulse CDHDE-0102AAP (with connector)/ Servotronix Bus CDHDE-0102AEB (with connector)

• Motor Parameters

YK-KE-195-B	
Peak thrust	2244.0 N
Continuous thrust	561.0 N
Motor constant	31.5N/(W1/2)
Max. continuous power dissipation	375.8W
Peak current	20.0 Arms
Continuous current	5.0 Arms
Force constant	112.2 N/Arms
Back EMF	91.8 Vpeak/(m/s)
Resistance Phase to Phase @25°	7.8 ohms
Inductance phase to phase	64.3 mH
Electrical time constant	9.2ms
Max. terminal voltage	540Vdc
Max. winding temperature	120°C
Coil weight	5.4KG
Electrical cycle length	20.0mm

Flat plate motor (with iron core)

It can provide the maximum output force per unit volume. With the adjustment of the driver, it can replace various coreless applications. The high thrust of the motor is most suitable for maintaining high rigidity during high acceleration and rapid movement, and the product is also relatively affordable.

High current High speed

■ Product Introduction

A linear motor with iron core consists of a rotor and a stator with a single-row magnetic circuit. The rotor and the stator move relative to each other through an air gap magnetic field. The rotor is made of copper wire coils wound around the iron core through vacuum encapsulation. Therefore, it is called a linear motor drive with iron core; its overall structure is similar to a flat plate, so it is also known as a flat plate motor.

■ Advantages

- The iron core adopts a laminated structure to concentrate magnetic flux and it has a high thrust density.
- A reasonable laminated structure and large surface area result in good heat dissipation performance.
- The modular design of the stator allows infinite splicing and infinite stroke.
- The stator is designed with a simple structure and is provided with a single row of magnet, so it has a significant price advantage.

■ Reading Method of Trade Name

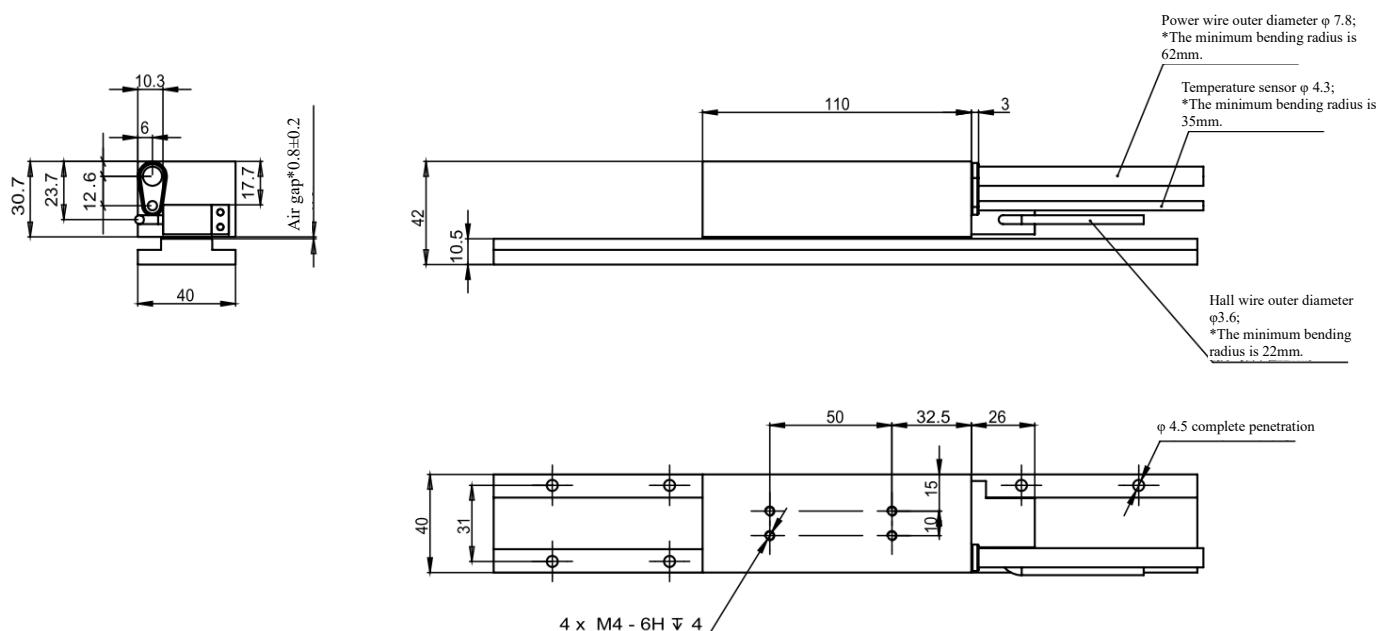

Rotor series	Iron core width	Winding connection method	Temperature control	Provided with Hall	Cable length	Provided with magnetic ring or not
PMQ	20	C2	A	H	1M	NMR
PMQ	20	C2/C4	A	H: Provided NH: Not provided	1M	NMR
PMQE	35/35L	C2/C4/C6				
	55/55L	C2/C4/C6				
	75/75L	C2/C4/C6				

*The L specification has high-current and high-speed performance

Rated thrust	547.00.00N	
Rated current (*1)	7.50Arms	10.00Arms
Peak thrust (*1)	1255.00N	
Peak current	27.00Arms	36.00Arms
Thrust constant ± 10%	72.93N/Arms	54.70N/Arms
Back electromotive force constant ± 10%	59.51V(pk)/m/s	44.64V(pk)/m/s
Resistance (*2)	2.50Ω	1.40Ω
Inductance (*3)	17.80mH	9.90mH
Electrical time constant	7.12ms	7.07ms
Magnetic attraction	2.30KN	
Coil maximum temperature	120.00°C	
Polar distance (N-N)	24.00 mm	
Rotor length	310.00mm	
Rotor mass	4.10Kg	
Stator mass	5.00kg/m	

*1: Measurement room temperature at 25 °C, which is closely related to the heat dissipation conditions;

*2: UV, VW, UW mean value, measured using DC current, including 1 meter standard cable;

*3: UV, VW, UW mean value, measurement frequency 1kHz.

*4: For the L motor, its current and maximum speed are increased.

■ Wire Specifications

Cable Parameters	
Power cable diameter	φ7.8mm (4×1mm ²)
Min. turning radius of power cable	62.0mm
Definition of power cable	4 cores (U: Black1, V: Black2, W: Black3, PE: Yellow/Green) shielded
HALL cable diameter	φ3.6mm (5×0.1mm ²)
Min. turning radius of HALL cable	22.0mm
Definition of HALL cable	5 cores (5V: red, 0V: black, HU: yellow, HV: blue, HW: white) shielded
Temperature sensor cable diameter	φ4.3mm (4×0.1mm ²)
Min. turning radius of temperature sensor cable	35.0mm
Definition of temperature sensor	4 cores (PTC+: brown, PTC -: white) shielded

● PMQE75-C6/PMQE75L-C6

■ Motor Performance Parameters

Model name	PMQE75-C6	PMQE75L-C6 (*4)
Maximum bus voltage	600.00V	
Rated thrust	742.00.00N	
Rated current (*1)	7.50Arms	10.00Arms
Peak thrust (*1)	2222.00N	
Peak current	27.00Arms	36.00Arms
Thrust constant ± 10%	98.93N/Arms	74.20N/Arms
Back electromotive force constant ± 10%	80.73V(pk)/m/s	60.55V(pk)/m/s
Resistance (*2)	3.20Ω	1.85Ω
Inductance (*3)	22.60mH	13.20mH
Electrical time constant	7.06ms	7.14ms
Magnetic attraction	3.30KN	
Coil maximum temperature	120.00°C	
Polar distance (N-N)	24.00 mm	
Rotor length	310.00mm	
Rotor mass	5.40Kg	
Stator mass	6.40kg/m	

*1: Measurement room temperature at 25 °C, which is closely related to the heat dissipation conditions;

*2: UV, VW, UW mean value, measured using DC current, including 1 meter standard cable;

*3: UV, VW, UW mean value, measurement frequency 1kHz.

*4: For the L motor, its current and maximum speed are increased.

KUM series U-shaped motor (without iron core)

For detailed technical information and specifications of this product, please refer to the official website.

It is a coreless linear motor without winding slots and has absolute zero tooth space effect

It is suitable for extremely low friction, light loads, and high acceleration.

Due to the characteristics of low-speed ripples, it can meet the stable motion requirements at ultra-low speed.

■ Motor Performance Parameters

Model name	YK-KUM03	YK-KUM06	YK-KUM09	YK-KUMU	YK-KUM15
Maximum bus voltage			600.00V

Carbon fiber linear motor

For detailed technical information and specifications of this product, please refer to the official website.

■Features

High Acceleration

Acceleration of 17g, speed of 3m/s, stroke of 160mm, movement of 100mm, completed within 60ms including the setting time, setting accuracy of 3-5um.

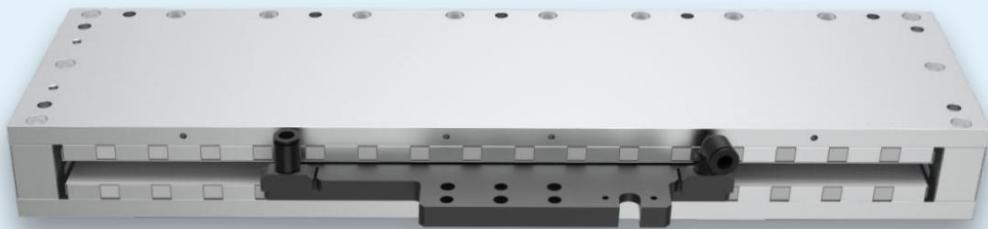

High Efficiency

Coreless motor, smooth thrust.

- Zero tooth space force, smooth operation, easy to control
- Made of carbon fiber/glass fiber material, the rotor has a light weight and a thrust to weight ratio of up to 2000
- Small speed fluctuations and easy trajectory control

Definition of linear motor interface
