Company Profile

Situated in the scenic hometown of Mo-tse — Tengzhou city, Shandong Province, Shandong Weida Precision Intelligent Machinery Co., Ltd. is a large-scale joint-stock enterprise with the right of Import&Export. It covers an area of 500,000 m², the building zone is about 350,000 m², and the total assets is more than RMB1 billion, there are 365 engineers, the main processing equipments are imported from Germany Waldrich Corburg guide grinder, Heckert, Heller and DMG horizontal machining center, Japan Okuma, New Japan SNK gantry type five-face boring and milling center, 132 sets of testing and debugging equipment. The company has set up a scientific research achievement transformation base in cooperation with Shandong University, cooperated with Huazhong University of Science and Technology in industry-university research, which composed of Technology research and Development Center, Information Data Processing Center, Product Inspection & Testing Center and Metrology room. In 2022, setting up a horizontal CNC machine tool engineering research center in Shandong Province.

Business Fields

In recent years, through the combination of absorbing advanced technology from abroad, cooperating with scientific research institutes and self-development and design, the main products have developed to 10 series: Automatic production line, Bridge type five-axis gantry machining center series, Gantry type/Vertical/Horizontal machining center series, CNC milling machine series, Horizontal boring and milling machine series, Radial drilling machine series, CNC lathe machine series, Milling/Drilling machine series, altogether more than 90 specifications. With stable capability & reliable quality, the products are widely sold both in home and abroad market, covering more than 70 countries and regions, especially Europe & America market.

Professional Certifications

WEIDA company pursues the quality strategy of creating famous brand and excellent reputation. It has obtained ISO9001:2015 Standard Quality System Certification, ISO14001:2015 Environmental Management System Certification, ISO45001:2018 Occupational Health And Safety Management System Certification from CQC accreditation body; EU "CE" certification; National High-tech Enterprise; Shandong Province "Specialized and Special New" Enterprise; In 2022, we passed the certification of two integration management system.

From 2011 to 2021, we were multiply honored as one of the "Top 10 Export Enterprises in China Machine Tool Industry"; In 2014, the company undertook the Science and Technology Major Special Project of "National High-grade CNC Machine Tools and Basic Manufacturing Equipment"; The XH2130 CNC Gantry Boring and Milling Center and DMC1300 Gantry Machining Center independently designed and developed by WEIDA won the "National Chunyan Award"; it was awarded as one of the Top 30 Enterprises in China Machine Tool Industry for three consecutive years in 2015, 2016 and 2017.

品质&精度

QUALITY ACCURACY

THE RELENTLESS PURSUIT OF QUALITY AND PRECISION IS THE CHARACTERISTICS OF WEIDA AND ITS STAFF

龙门式五轴加工中心系列 Gantry type five axis machining center series

11-18

卧式五轴加工中心系列 Horizontal type five axis machining center series

19-26

立式五轴加工中心系列 Vertical type five axis machining center series

性能特点 PERFORMANCE

- Suitable for automotive mold, aerospace, printing, packaging, textile, military and other machining fields.
- The latest model structure, modular structure design, has the best machine rigidity.
- The bridge gantry structure has a footprint that is approximately 56% of that of a traditional table-moving structure.
- Fixed table, load capacity doubled, and machine tool machining characteristics are not affected by the quality of the workpiece.
- The patented one-piece bed table and column form a U-shaped frame structure with strong structural rigidity and high stability.
- The column adopts "honeycomb" bionic structural design with high structural rigidity.
- Adoption of patented technology cable fine-tuning mechanism of large span high rigidity gantry welded crossbeam, effectively solving the problem of large span crossbeam with low long-term accuracy retention and unadjustable.
- The crossbeam, slide plate and ram adopt the patented double-nested thermo-symmetric "box-in-box" structure, which is characterized by strong structural rigidity and excellent thermal balance performance.
- X, Y and Z axes all adopt "hollow screw" and patented "nut circulation oil cooling" technology, which can effectively control the influence of temperature rise on the precision of the machine tool.
- X-axis and Z-axis adopt double ball screw synchronized dual drive technology.
- X, Y and Z axes all adopt heavy-duty linear roller guideways with strong load bearing capacity.
- X, Y and Z axes adopt grease lubrication system, which is both environmentally friendly and reliable.
- The balancing cylinders are symmetrically arranged on both sides of the ram, and the Z-axis response speed is fast.

标准配置 STANDARD

- Kessler double-arm fork type 5-axis milling head is equipped as standard: direct drive by torque motor, permanent precision.Encoder direct measurement, absolute accuracy, A/C axis speed : 100rpm, A/C axis brake torque : 2160/3024N, A/C axis cooling : constant temperature water cooling.
- All axes are equipped with linear scales to improve precision and reliability.
- Standard CNC controller Siemens SINUMERIK ONE
- Horizontal chain chip conveyor as standard

选择配置 OPTION

- CNC controller Heidenhain TNC640/TNC7
- HSK-A100-15000rpm high rigidity electric spindle.
- Equipped with German BLUM laser tool setting instrument to realize fast and reliable tool setting.
- Renishaw automatic workpiece measurement system.
- 24pcs, 32pcs and 40pcs ATC

BRIDGE TYPE HIGH SPEED FIVE AXIS GANTRY MACHINING CENTER

GMC2232bu

BRIDGE TYPE HIGH SPEED FIVE AXIS GANTRY MACHINING CENTER

性能特点 PERFORMANCE

- Square ram with four linear guide ways and slider with encryption structure; High stability; With the characteristic of strong structural rigidity and excellent thermal balance performance.
- X-axis adopts precision rack and pinion transmission structure, the drive adopts double motors and double planetary reducer electrical backlash mode, double motors to realize master-slave control, which can effectively improve the positioning accuracy.
- Y, Z axis adopts "hollow screw" or patented "nut circulation oil cooling" technology, which can effectively control the influence of temperature rise on the accuracy of the machine tool.
- X, Y, Z axes all adopt heavy-duty linear roller guideway, with strong loading capacity.

标准配置 STANDARD

- Kessler double-arm fork type 5-axis milling head is equipped as standard: direct drive by torque motor, permanent precision.Encoder direct measurement, absolute accuracy, A/C axis speed : 100rpm, A/C axis brake torque : 2160/3024N, A/C axis cooling : constant temperature water cooling.
- All axes are fully closed-loop controlled by scale to improve accuracy and reliability.
- Standard CNC controller Siemens SINUMERIK ONE
- Equipped with double chain plate chip conveyor as standard.

选择配置 OPTION

- CNC controller Heidenhain TNC640/TNC7
- HSK-A100-15000rpm high rigidity electric spindle.
- Equipped with German BLUM laser tool setting instrument to realize fast and reliable tool setting.
- Renishaw automatic workpiece measurement system.

性能特点 PERFORMANCE

- The X, Y and Z axes all use heavy-duty linear roller guideways.
- The beam adopts vertical orthogonal linear guide structure to meet the demand of large span and high rigidity.
- The square ram four-line rail encircles the roller guide and slider encrypted structure, with high stability. It is characterized by strong structural rigidity and excellent thermal balance performance.
- X, Y, Z-axis adopts "hollow screw" or patented "nut circulation oil cooling" technology, which can effectively control the impact of temperature rise on the accuracy of the machine.
- X, Y, Z-axis adopts independent lubricant recycling system balancing cylinders are arranged symmetrically on both sides of ram, and Z-axis has fast response speed.
- Suitable for automotive mold, aerospace, printing, packaging, textile, military and other machining fields.

标准配置 STANDARD

- Kessler double-arm fork type 5-axis milling head is equipped as standard: direct drive by torque motor, permanent precision.
- Encoder direct measurement, absolute precision, A/C axis speed : 100rpm, A/C axis brake torque :2160/3024N.Constant temperature water cooling on A/C axis.
- All axes are fully closed-loop controlled by scale to improve accuracy and reliability.
- Standard equipped with Siemens ONE CNC controller.
- Equipped with horizontal chip type conveyor as standard.

选择配置 OPTION

- Heidenhain TNC640/TNC7 CNC controller.
- HSK-A100-15000rpm high rigidity electric spindle.
- Equipped with German BLUM laser tool setting instrument to realize fast and reliable tool setting.
- Renishaw automatic workpiece measurement system.

MOVING TABLE FIVE AXIS GANTRY MACHINING CENTER

GMU 2040 / GMU 2560

GMU 3060

GMU2040

MOVING TABLE FIVE AXIS GANTRY MACHINING CENTER

性能特点 PERFORMANCE

- The machine adopts positive T type three-point support bed, frame-in-frame overall structure design, with better rigidity and excellent thermal balance performance.
- X, Y and Z axes all adopt high-strength roller linear guideway to ensure high rigidity and positioning accuracy.
- Equipped with 45°automatic indexing direct-drive milling head, and the milling head is equipped with a self-locking mechanism, which has a large locking torque, stable and reliable locking, and the rotating speed of the pendulum head can reach 60r/min.
- The spindle of milling head adopts direct-drive electric spindle with high speed, low vibration and excellent machining performance.
- The milling head spindle nose is designed with spindle air curtain to prevent debris from entering and ensure spindle accuracy and life.
- The rotary table adopts direct drive technology of torque motor, which can rotate 360° and the speed can reach 40r/min.
- X, Y, Z three-axis adopts motor direct screw structure, X, Z axis for the double ball screw synchronous drive, reasonable layout, faster response.
- X, Y, Z axis is equipped with linear scale, B, C axis is equipped with circular time scale, five-axis full closed-loop control improves the machining accuracy and stability.
- X, Y, Z three-axis adopts "hollow screw" technology, bearing ring cooling technology, the whole machine five-axis constant temperature water cooling, effective control of temperature rise on the precision of the machine.
- The speed of X, Y and Z axes can reach 60m/min, which improves the machining efficiency.
- The tool cooling and lubrication adopts the spindle ring spray cooling system with high flow rate.
- The machine is equipped with SINUMERIK ONE controller.
- Equipped with 45pcs large-capacity tool magazine system, meets the demands of multi-process and multi-featured machining, reduces the machining auxiliary time and improves the machining efficiency.
- The machine adopts independent PLC-controlled centralized lubrication device to automatically lubricate the screws and guide rails of each motion axis.
- The machine is equipped with double screw chip conveyor and double chain chip conveyor as standard and at the same time configured with large flow top chip flushing, which can realize fully automatic chip discharge of the machine.
- It is applicable to various machining fields such as automobile industry, mold industry, aerospace industry, machinery manufacturing industry, energy technology industry and so on.

5-AXIS HORIZONTAL MACHINING CENTER

HMU1250

5-AXIS HORIZONTAL MACHINING CENTER

标准配置 STANDARD

- Equipped with 45°automatic indexing direct-drive milling head as standard.
- X, Y, Z axis is equipped with linear scale, B, C axis is equipped with circular time scale.
- X, Y, Z axis hollow screw constant temperature water cooling
- 45T arm type tool magazine
- Direct-drive rotary table
- Equipped with Siemens SINUMERIK ONE CNC controller as standard.
- Equipped with double screw chip conveyor+double chain chip conveyor+top flushing chip as standard.

选择配置 OPTION

- 40pcs or 60pcs chain type tool magazine
- Automatic tool measuring system
- Automatic workpiece measurement system
- B, C-axis circular scale
- 2Mpa, 3Mpa, 5Mpa CTS
- Turning function, a clamping can be completed turning, milling, boring and other forms of processing

Three-point support bed

The bed adopts high rigidity and low stress structural large casting technology to guarantee good accuracy retention;

Screw base and machine bed is one-piece casting

Three-axis configuration with thermal compensation measures

Adoption of hollow screw cooling
Adoption of bearing ring cooling

Self-made 45° direct drive pendulum head and high speed spindle.

High torque, high positioning accuracy, high spindle speed and low vibration.

Dual-drive synchronization technology for X and Z axes

Dual-drive synchronization technology for both X and Z axes improves machine response, accuracy retention and travel speed.

Frame-in-frame overall structure

The column and slide plate form a frame-in-frame structure, and the slide plate is supported in the full range of travel, compared with the transmission of a single-column type HMC, the spindle box is more rigid in the highest position of the Z-travel, reducing vibration due to the lack of rigidity of the column.

5-AXIS HORIZONTAL MACHINING CENTER

HMC1000u

5-AXIS HORIZONTAL MACHINING CENTER

性能特点 PERFORMANCE

- T bed with three-point support structure, better machine rigidity
- The back guideway of the bed is low at the front and high at the back, which reduces the weight of the column and improves the motion performance of the machine.
- X, Y and Z axes all adopt high-strength roller linear guideways to ensure high rigidity and geometric accuracy of the machine.
- Adoption of 45° pendulum head, small machining interference area, strong machining adaptability
- Pendulum head adopts high torque motor, direct drive, with circular scale, good motion performance, high rotary positioning accuracy.
- Pendulum head spindle adopts electric spindle with high speed, low vibration and excellent machining performance.
- The spindle nose of the milling head is equipped with spindle front seal to prevent dust and debris from entering, ensuring spindle accuracy and life.
- The lifting and lowering of spindle box adopts double-screw synchronous drive, with reasonable arrangement and faster response.
- Five-axis full closed-loop control improves machine accuracy and stability
- Adopting water cooling technology of hollow screw and cooling technology of bearing ring sleeve, effectively controlling the influence of temperature rise on the precision of machine tool.
- With high flow spindle ring spray cooling system
- Equipped with a large-capacity tool magazine system to meet the needs of multi-process, multi-featured machining, reduce machining assistance time and improve machining efficiency.
- The machine adopts an independent PLC-controlled centralized lubrication device to automatically lubricate the screws and guideways of each axis of motion.
- The machine is equipped with double screw chip conveyor + double chain chip conveyor as standard, and at the same time equipped with high-flow chip flushing, which can realize fully automatic chip removal on the machine.
- Suitable for a wide range of machining applications, such as automotive, mold and die industry, aerospace, machine building, energy technology, etc.

标准配置 STANDARD

- 45° automatic indexing direct-drive pendulum head
- Full closed loop control
- Hollow ball screw
- 40pcs chain type tool magazine
- Siemens SINUMERIK ONE CNC Controller
- Double screw chip conveyor + double chain chip conveyor + top chip flushing

选择配置 OPTION

- 60pcs chain type tool magazine
- Automatic Tool Measuring System
- Automatic Workpiece Measuring System
- Coolant through spindle system (CTS)
- Turning function, one time clamping can be completed turning, milling, boring and other forms of processing

5-AXIS HORIZONTAL MACHINING CENTER

HMC1000y

5-AXIS HORIZONTAL MACHINING CENTER

性能特点 PERFORMANCE

- Heavy-duty roller linear guideways are used in X, Y and Z axes to improve the rigidity of the machine.
- Adopts hollow water-cooled screw, precision water-cooled machine with constant temperature control, stable positioning accuracy of the machine tool.
- The machine's rapid traverse speed of 48m/min reduces machining time and improves machining efficiency.
- Adopts absolute Heidenhain system for control, high stability and speed
- Rotary table adopts direct drive technology, no intermediate transmission link, high positioning accuracy
- Adoption of precision electric spindle, high speed, low vibration, high processing efficiency
- Spindle box lifting adopts double-screw synchronous double-drive technology, which enhances the lifting response speed.
- The machine adopts T-shaped three-point support integral bed, and the structure is made more reasonable through finite element analysis in the design process.

标准配置 STANDARD

- Standard with Heidenhain TNC640/TNC7
- Full closed-loop control
- Hollow screw thermostatic water cooling
- 40T Chain type tool magazine
- Double screw chip conveyor + double chain chip conveyor + top chip flushing

选择配置 OPTION

- 60T chain tool magazine
- Automatic Tool Measuring System
- Coolant through spindle
- Siemens SINUMERIK CNC control system

FIVE-AXIS VERTICAL MACHINING CENTER

DMC800u

5-AXIS VERTICAL MACHINING CENTER

性能特点 PERFORMANCE

- Excellent structural design**
- Bed, column double U-shaped structure design, constituting a return force flow structure, greatly improving the rigidity of the machine and accuracy retention.
 - Compact machine layout with guideways, drives and tool changers safely locates outside the machining area
 - The four beveled square-open chip discharge structure in the inner cavity of the bed constitutes a smooth chip discharge method, which reduces the accumulation of iron chips during the machining process of the machine.
 - The column adopts a center-mounted ball screw transmission structure, which effectively suppresses the vibration of the machine tool during high acceleration and deceleration.
 - The crossbeam adopts a large span 4 guide rails support structure, which effectively improves the rigidity of the whole machine operation and increases the machining precision.

- Highly reliable and efficient drive positioning system**
- X, Y, Z are connected to high-precision ball screw through backlash-free elastic coupling , to ensure the positioning accuracy of the machine tools
 - X and Z axis adopts Taiwan HIWIN 45mm wide roller linear guideway, Y axis adopts 4pcs 55mm roller linear guideway to improve transmission rigidity.
 - The rotary axes A and C are equipped with high torque motors, which optimizes the rotary accuracy of the whole machine. The table load capacity is up to 1200kg, with large processing range.
 - The working table has a large swing range of ±120°, and can process 30° bottom cutting processing.
 - Configured with high torque and high speed electric spindle, with wide range of speed change; constant temperature water circulation cooling method ensures the stability of spindle rotary
 - precision.

- Reasonable configuration**
- Pneumatic protection door is equipped between the machining area and the tool magazine, and the protection design is humanized.
 - The spindle adopts air blowing structure, and the inner taper hole of the spindle and the shank of the tool are cleaned before the tool change to remove the residue and ensure the high precision and rigidity of the spindle.
 - 3D simulation and comprehensive tool management functions are possible.
 - The machine adopts centralized automatic lubrication device with electric pump to lubricate the screw and guideway surface automatically and intermittently at regular time and quantity, which is stable and reliable.

标准配置 STANDARD

- Built-in electric spindle unit
- High torque A and C 5-axis rotary table
- Linear scale on three axes
- Siemens ONE control system
- 32 pcs tool magazine

选择配置 OPTION

- Heidenhain TNC640/TNC7 controller
- Laser tool setter
- Automatic Workpiece Measuring System
- 40/60 pcs tool magazine
- X,Y linear motor, Z double drive
- Turning function

性能特点 PERFORMANCE

- Truss frame layout, integrated design structure of column and bed
- The bed, column, slide, table and spindle box is with reinforcement and corner support plates
- Germany roller linear guides for X,Y,Z axis
- The motors of X Y Z axis and the lead screws are directly connected with a gapless elastic coupling
- Drive type spindle unit

标准配置 STANDARD

- Siemens Sinumerik One
- Taiwan direct drive motor rotary table with double axis and single arms
- Full-axis scales with fully closed-loop control
- Chain type chip conveyor

选择配置 OPTION

- Heidenhain TNC 640 / TNC7 five axis linkage CNC control system
- Linear motor
- Online inspection system for tools and workpieces
- Coolant through spindle
- Turning-milling function
- 4+1 axis, 3+2 axis

FIVE FACE VERTICAL MACHINING CENTER

CMC500f

FIVE FACE VERTICAL MACHINING CENTER

主要结构特点 MAIN STRUCTURAL FEATURES

Excellent structure design

- Column and base in one piece with low gravity and stable structure to make the machine with high static and dynamic stability.
- Compact design :linear guides, driven, measuring and tool change system are all safely beyond of the machining area.
- Large-scope bed design to make sure the chips easily falling to the chip conveyor leading to a perfect machining environments.
- The whole machine adopts A and B swing layout combining with XYZ to realize 5 axis interpolation.

High reliable and efficiency transmission system

- Direct driven by imported gap-free coupling in XYZ axis to ensure the transmission rigidity and machine positioning accuracy.
- High accuracy roller type guideway in XYZ axis and DD motor in A B axis to optimize the machine spatial accuracy.
- Large swing in B axis to be 80 degree.

Automated and humanized accessories

- The guard plate between the machining area and the tool magazine makes the protection design more user-friendly.
- The spindle adopts the centre blowing structure to clean the inner taper hole of the spindle and the shank of the tool before tool change to remove the residue and ensure the high precision and rigidity of the spindle.
- The machine is equipped with the high tech siemens one system to realize 3D simulation and tool management function.
- The machine is equipped with electric centralized lubrication pump which is stable and reliable to lubricate the screw and linear guideway surface at regular interval.
