Core Product Management Software

- Medical management software module, based on B/S architecture design Contains central server
- data management module, supports docking database, supports expansion of HIS docking
- module, real-time synchronization and automatic update, supports expansion of information
- dashboard module, displays nursing information

Information Board

- Information dashboard module, supports personalized customization Based on TCP/IP
- network protocol to transmit data information Bed list, ward information, nursing statistics, etc.
- Support automatic data synchronization from HIS system
- Combined with multimedia box and TV to achieve

ICU Visit

Visual Intercom

- Support two-way video intercom between visitor and patients to know the real-time status of patients

Multi-party intercom

- Support multi-party intercom among family members, patients and medical staff

Visiting supervision

- During intercom between visitor and patient, nurse can interrupt or end the call.

Video and Audio Recording

- Support video and audio intercom record save
