

ZMJ80XD

Density Monitor

Description

ZMJ80XD Density Monitors are used to monitor SF₆ gas density in sealed tanks. They are applied to indicate the gas density and to provide signal outputs when the density reaches the set values. They are designed to monitor High Voltage systems. They can provide multiple solutions to support new substations and the renovation and upgrading of existing substations.

Features

- Higher accuracy from reference chamber temperature compensation technology.
- Class 1.0 display accuracy for full scale range.
- More accurate gauge indication values and contact switching values throughout the temperature range. Suitable for indoor or outdoor installation.
- Up to three (4) sets of switch contacts.
- High shock resistance, no need to fill oil therefore no oil leakage hazard.
- Normally closed contacts will not falsely alarm due to vibration.
