INVENTION PATENT NUMBER: ZL2018 11045005.0

PATENT NAME: A TRADITIONAL CHINESE MEDICINE FOR THE PREVENTION AND TREATMENT OF GYNECOLOGICAL DISEASES AND ITS PREPARATION METHODS AND APPLICATIONS

Easy to use, feeling better

Thoughts hidden inside
Clear leukorrhea, no odor
The cervix is smooth and flat
The uterus has good blood circulation

Vaginal firmness and moisturizing
No itching, pain and burning sensation
The regularity of menstruation is dark red
No various kinds of inflammation problems

New fashion of gynecological physiological care

24-hour three barrier protection:pathological barrier protection, physiological barrier protection; nursing barrier protection can kill bacteria and relieve itching, improve immunity, and effectively prevent and treat gynecological inflammation

Instead of making up for it afterwards, it's better to prevent it in advance - beware of the harm of gynecological fatigue

Modern women should be especially wary of the harm caused by gynecological diseases. There is no age limit for gynecological diseases. As long as women is a possibility of suffering from the disease. Due to the unique semi-open physiological structure of women, most of them are caused by not paying attention to menstruation and postpartum hygiene or unclean sexual intercourse. Gynecological diseases are mainly caused by inflammation, uterine fibroids, cervical polyps, cervicitis, etc. Relevant experts pointed out that gynecological diseases will affect women's ovarian function, which will lead to metabolic hormone disorder and endocrine disorders, which will lead to estrogen and progesterone disorders, causing women's delicate, white and smooth skin to appear prematurely on facial spots and wrinkles, and causing constipation, sores, obesity, hyperlipidemia and other diseases, accompanied by mental Depressed, even cancerous.

No *No 24-hour three barrier protection's* gynecological treatment, easy to lead to recurrent gynecological inflammation

Do you know? The results of the epidemiological academic survey show that there is no obvious difference in the incidence of gynecology in urban and rural areas, indicating that the commonly used methods of washing plugs or high-dose antibiotics to treat gynecological diseases have obvious limitations, which causes safety hazards to women's own health:

- ◆ Destroy the "two major balance systems" in the vagina, and the loss of physiological barrier function leads to repeated attacks of inflammation;
- ◆ Antibiotics produces drug-resistant germs, which prolongs the treatment period of gynecological inflammation;
- ◆ It is easy to cause cross-infection when treated with test agents, which increases the difficulty of gynecological inflammation treatment;
- ◆ The "out-of-control state" in the vagina cannot be treated during the day, which increases the probability of infection with diseases;

"Zimeishu Three barrier protection" will greatly shorten the treatment time of gynecological inflammation, effectively improve the treatment effect, and truly eliminate the repeated attacks of women's natural travel.

Zimeishu suitable used group

People with four types of indications are most suitable for using Zimeishu:

The first population: patients with mycotic vulvitis, bacterial vaginitis, vulvar rash and other diseases are superficial inflammation, which is relatively mild. On the day when these discomfort symptoms appear, the treatment with the Zimeishu gynecological pad can directly remove and kill the pathogen, so that gynecological inflammation can be controlled and treated in time: after using a course of treatment, the vulvar itching and odor symptoms will immediately disappear and restore the normal physiological state.

The second population: pathogens are relatively stubborn, the course of the disease is long, drug-resistant pathogens are infected with more recurrent gynecological diseases, and gynecological diseases with more than two pathogens are mixed infection (such as moldy vaginitis, trichomoniasis vaginitis, senile vaginitis, and cepynitis. Patients with mycoplasma infection, appendages, etc.) need to use Zimeishu for "joint treatment" to get a good therapeutic effect.

The third population: postpartum and post-abortion people, Zimeishu gynecological pads are the first choice of "anti-infection and promote trauma healing" women's nursing products.

The fourth population: working women who pay attention to their own health and nursing, people who are prone to recurrent diseases with their body's immune function, and high-risk people.

Close-fitting and clean of the vagina, scientific maintenance of women's health

Zimeishu: For the first time, the combination of treatment and nursing science completely solved the unspeakable hidden of repeated attacks of gynecological inflammation, made up for the inconvenience and uncertainty of traditional therapy, improved the quality of women's life and health, promoted the development of human civilization, and formed a healthy living habit for women. A healthy woman, a strong nation!

姊妹舒 FIVE CHARACTERISTICS:

▲ Fast start and high security

Silver ion and traditional Chinese medicine extract essence, directly continuous sterilization and plant essence mucosal absorption, anti-inflammatory, anti-itch, odor removal, fast effect, no destruction of the physiological balance in the vagina, no irritation to the skin and mucous membranes of the genitals

▲ Keep it clean and convenient and hygienic

"Zimeishu" uses silver ions and the essence of traditional Chinese medicine extracts extracted by high technology, using non-woven cotton as a carrier to attach it to genitals, and uses "mucosal absorption and drug administration technology" to form a protective layer of genitals protection, nourishing genitals in the genitals. Silver ions move freely from the genitals into the vagina, and the plant essence enters reproductive organ through the vulva mucosa. Entering the reproductive organs can not only kill and expel gynecological pathogenic bacteria in the body, but also block the pathogenic bacteria from the private parts, keep the inside and outside of the vagina clean every moment, and make the germs inorganic. Independent packaging, truly sterile, fully in line with the habit of using women's hygiene products; thin, easy to carry and use, whether work, business trip, sports, not any affected, no embarrassment!

▲ A Continuous non-stop nursing treatment

It eliminates the "blank period" of traditional nursing treatment - during the day, it is easy to achieve all-day nursing treatment. Because there is more chance of vaginal contamination during the day than at night, if only protective treatment is used at night, it will prolong the duration of the disease, reduce the cure rate, and the symptoms are easy to recur. Therefore, only continuous treatment at night can achieve good results.

▲ Refreshing and comfortable

The appearance of the medical pad is comfortable and soft, and the silver ion free movement and the absorption and administration of the vaginal and uterine mucosa, and the feeling is refreshing and moisturizing.

▲ A Treatment without damage

"Zimeishu" absorbs the latest research results of modern physiological anatomy, pharmacology, immunology, microcirculation, reproductive physiology and endocrinology, and uses silver ion and a extract essence mucosal absorption to treat without damage.

Zimeishu's treatment and nursing are synchronized. Beauty and health are combined with prevention and treatment. Prevention is the main focus. It has become a new fashion for women's health.

Suitable for treatment:gynecological fungal vulvitis, non-abnormal vulvitis, vulvar itching, vulvar eczema, etc.; and it is used for the auxiliary treatment of gynecological vaginitis, cervicitis, pelvic inflammatory disease, adnexitis and other gynecological vulvitis infections: prevention and treatment of postpartum and postoperative wound infections;Improve the disease resistance of female reproductive organs.

Product effect:Clearing heat, dryness and dampness, detoxifying and relieving itching, invigorating blood and regulating menstruation. It has a rehabilitation and health care effect on the discomfort caused by menstrual irregularities, dysmenorrhea, vaginitis, cervicitis, etc.

轻松Lightly stick and the feel is so good

Gynecological diseases are characterized by easy treatment, difficult to prevent, and prone to recurrent attacks. Obstetricians and gynecologists unanimously emphasize that when treating various vaginitis and selecting targeted drugs, great attention should be paid to the recovery of the vaginal microecological environment. Only then can the ideal therapeutic effect be achieved. "Zimeishu" can drain and detoxify, repair damage, promote the metabolism of vaginal wall cells, and promote the rapid recovery of the micro-ecological environment. The weak acid formula conforms to the PH value of women's vaginal self-cleaning and protects the beneficial bacteria in vagina.

●●●SCOPE OF APPLICATION AND TREATMENT●●●

INDICATIONS	SYMPTOM	THE DISEASE CAUSE	TREATMENT
Vulvitis	Itching, pain or burning sensation of the vulva skin is aggravated during activity,sexual intercourse and urination	Unclean vulva, increased vaginal secretions, or menstrual pads, urinary fistula patients' urine and other stimuli	1-2
